Serial No. 10/716,770 Customer ID: 38396

IN THE CLAIMS:

Please amend the claims as follows:

- 1-23. (Canceled)
- 24. (Currently amended) An apparatus, comprising a cantilever structure including:
 - a substrate including a cantilever body that includes a doped layer; and
- a <u>substantially</u> vertically aligned, <u>with respect to a plane of the cantilever body</u>, <u>elongated</u> nanostructure coupled to the cantilever body.

wherein the substantially vertically aligned elongated nanostructure is directed out of the plane of the substrate.

- 25. (Currently amended) The apparatus of claim 24, further comprising another <u>substantially</u> vertically aligned nanostructure coupled to the cantilever body.
- 26. (Currently amended) The apparatus of claim 24, wherein there are no other substantially vertically aligned nanostructures coupled to the cantilever body.
- 27. (Currently amended) The apparatus of claim 24, wherein the <u>substantially</u> vertically aligned nanostructure is coupled to the cantilever body at a photolithographically defined location.
- 28. (Currently amended) The apparatus of claim 24, wherein the <u>substantially</u> vertically aligned nanostructure is located toward an end of the cantilever body and substantially on a longitudinal center line of the cantilever body.
- 29. (Currently amended) The apparatus of claim 24, wherein the <u>substantially</u> vertically aligned nanostructure includes a carbon nanofiber.
- 30. (Currently amended) The apparatus of claim 24, wherein the <u>substantially</u> vertically aligned nanostructure includes a single wall carbon nanotube.

Serial No. 10/716,770 Customer ID: 38396

- 31. (Currently amended) The apparatus of claim 24, wherein the <u>substantially</u> vertically aligned nanostructure includes a multi-wall carbon nanotube.
- 32. (Currently amended) The apparatus of claim 24, wherein the <u>substantially</u> vertically aligned nanostructure includes an expanded base and a substantially cylindrical nanostructure coupled to the expanded base.
- 33. (Currently amended) The apparatus of claim 24, further comprising a nanostructure deactivating layer that substantially surrounds a portion of the <u>substantially</u> vertically aligned nanostructure.
- 34. (Original) The apparatus of claim 33, where in the nanostructure deactivating layer includes Si_3N_4 .
- 35. (Currently amended) The apparatus of claim 24, further comprising an electrically conducting layer coupled between the <u>substantially</u> vertically aligned nanostructure and the doped layer of the cantilever body.
- 36. (Currently amended) The apparatus of claim 35, wherein the electrically conducting layer includes an electrical interconnect to the <u>substantially</u> vertically aligned nanostructure.
- 37. (Original) The apparatus of claim 24, wherein the doped layer is degeneratively doped to a metallic state.
- 38. (Currently amended) The apparatus of claim 24, wherein the <u>substantially</u> vertically aligned nanostructure is hydrophobic.
- 39. (Currently amended) The apparatus of claim 24, wherein the <u>substantially</u> vertically aligned nanostructure is hydrophilic.
- 40. (Currently amended) The apparatus of claim 24, wherein a tip region of the <u>substantially</u> vertically aligned nanostructure is chemically modified.

- 41. (Original) A chemical force microscope tip comprising the apparatus of claim 24.
- 42. (Currently Amended) A chemical force microscope comprising the scanning probe chemical force microscope tip of claim 41.
- 43. (Original) A scanning probe microscope tip comprising the apparatus of claim 24.
- 44. (Original) A scanning probe microscope comprising the scanning probe microscope tip of claim 43.
- 45. (Original) A magnetic force microscope tip comprising the apparatus of claim 24.
- 46. (Currently amended) A magnetic force microscope comprising the <u>magnetic force</u> scanning probe microscope tip of claim 45.
- 47-70. (Canceled)
- 71. (Currently amended) An apparatus, comprising a cantilever structure including:
 a substrate including a cantilever body; and
 a <u>substantially</u> vertically aligned, <u>with respect to a plane of the cantilever body</u>, <u>elongated</u>
 nanostructure coupled to the cantilever body.
- 72. (Currently amended) The apparatus of claim 71, further comprising another <u>substantially</u> vertically aligned nanostructure coupled to the cantilever body.
- 73. (Currently amended) The apparatus of claim 71, wherein there are no other <u>substantially</u> vertically aligned nanostructures coupled to the cantilever body.
- 74. (Currently amended) The apparatus of claim 71, wherein the <u>substantially</u> vertically aligned nanostructure is coupled to the cantilever body at a photolithographically defined location.
- 75. (Currently amended) The apparatus of claim 71, wherein the substantially vertically

Serial No. 10/716,770 Customer ID: 38396

aligned nanostructure is located toward an end of the cantilever body and substantially on a longitudinal center line of the cantilever body.

- 76. (Currently amended) The apparatus of claim 71, wherein the <u>substantially</u> vertically aligned nanostructure includes a carbon nanofiber.
- 77. (Currently amended) The apparatus of claim 71, wherein the <u>substantially</u> vertically aligned nanostructure includes a single wall carbon nanotube.
- 78. (Currently amended) The apparatus of claim 71, wherein the <u>substantially</u> vertically aligned nanostructure includes a multi-wall carbon nanotube.
- 79. (Currently amended) The apparatus of claim 71, wherein the <u>substantially</u> vertically aligned nanostructure includes an expanded base and a substantially cylindrical nanostructure coupled to the expanded base.
- 80. (Currently amended) The apparatus of claim 71, further comprising a nanostructure deactivating layer that substantially surrounds a portion of the <u>substantially</u> vertically aligned nanostructure.
- 81. (Original) The apparatus of claim 80, where in the nanostructure deactivating layer includes Si_3N_4 .
- 82. (Currently amended) The apparatus of claim 71, further comprising an electrically conducting layer coupled between the <u>substantially</u> vertically aligned nanostructure and the cantilever body.
- 83. (Currently amended) The apparatus of claim 82, wherein the electrically conducting layer includes an electrical interconnect to the <u>substantially</u> vertically aligned nanostructure.
- 84. (Original) The apparatus of claim 71, wherein the cantilever body includes an etch stop layer.

- 85. (Canceled)
- 86. (Currently amended) The apparatus of claim 85 71, wherein the <u>substrate includes a</u> doped layer <u>that</u> is degeneratively doped to a metallic state.
- 87. (Currently amended) The apparatus of claim 71, wherein the <u>substantially</u> vertically aligned nanostructure is hydrophobic.
- 88. (Currently amended) The apparatus of claim 71, wherein the <u>substantially</u> vertically aligned nanostructure is hydrophilic.
- 89. (Currently amended) The apparatus of claim 71, wherein a tip region of the <u>substantially</u> vertically aligned nanostructure is chemically modified.
- 90. (Original) A chemical force microscope tip comprising the apparatus of claim 71.
- 91. (Currently amended) A chemical force microscope comprising the scanning probe chemical force microscope tip of claim 90.
- 92. (Original) A scanning probe microscope tip comprising the apparatus of claim 71.
- 93. (Original) A scanning probe microscope comprising the scanning probe microscope tip of claim 92.
- 94. (Original) A magnetic force microscope tip comprising the apparatus of claim 71.
- 95. (Currently amended) A magnetic force microscope comprising the scanning probe magnetic force microscope tip of claim 94.
